Applicant: Carl-Axel Bauer et al. Serial No.: 10/010,283 Filed: November 13, 2001

Page : 2 of 8

Amendments to the Specification:

Please replace the paragraph beginning at page 6, line 25, with the following amended paragraph:

The invention is illustrated by the following Examples which are not intended to limit the scope of the application. In the Examples micronisation is carried out in a conventional manner such that the particle size range for each component is suitable for administration by inhalation. Turbuhaler® is a trademark of Astra AB.

Please replace the paragraph beginning at page 7, line 2, with the following amended paragraph:

6 Parts by weight of formoterol fumarate dihydrate was mixed with 794 parts, by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616, 200 Parts by weight of micronised budesonide was added to the conditioned product by mixing and homogenising with a low pressure jet mill. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler® dry powder inhaler.

Please replace the paragraph beginning at page 7, line 10, with the following amended paragraph:

4.5 Parts by weight of formoterol fumarate dihydrate was mixed with 835 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. 160 Parts by weight of micronised budesonide was added to the conditioned product by mixing and homogenising with a low pressure jet mill. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler® dry powder inhaler.

Attorney's Docket No.: 06275-150003 / D 1841-3P US

Applicant : Carl-Axel Bauer et al. Serial No. : 10/010,283 Filed : November 13, 2001

Page : 3 of 8

Please replace the paragraph beginning at page 7, line 18, with the following amended paragraph:

12 Parts by weight of formoterol fumarate dihydrate was mixed with 588 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. 400 Parts by weight of micronised budesonide was added to the conditioned product by mixing and homogenising with a low pressure jet mill. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler® dry powder inhaler.

Please replace the paragraph beginning at page 7, line 26, with the following amended paragraph:

6 Parts by weight of formoterol fumarate dihydrate was mixed with 894 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. 100 Parts by weight of micronised budesonide was added to the conditioned product by mixing and homogenising with a low pressure jet mill. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Please replace the paragraph beginning at page 8, line 5, with the following amended paragraph:

4.5 Parts by weight of formoterol furnarate dihydrate was mixed with 915 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. 80 Parts by weight of micronised budesonide was added to the conditioned product by mixing and homogenising with a low pressure jet mill. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler® dry powder inhaler.

Applicant : Carl-Axel Bauer et al. Serial No. : 10/010,283 Filed : November 13, 2001

Page : 4 of 8

Please replace the paragraph beginning at page 8, line 13, with the following amended paragraph:

12 Parts by weight of formoterol fumarate dihydrate was mixed with 788 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. 200 Parts by weight of micronised budesonide was added to the conditioned product by mixing and homogenising with a low pressure jet mill. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler® dry powder inhaler.

Please replace the paragraph beginning at page 8, line 21, with the following amended paragraph:

6 Parts by weight of formoterol fumarate dihydrate was mixed with 994 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler. dry powder inhaler.

Please replace the paragraph beginning at page 8, line 26, with the following amended paragraph:

200 Parts by weight of micronised budesonide was mixed with 800 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Applicant: Carl-Axel Bauer et al. Senal No.: 10/010,283 Filed: Nevember 13, 2001

Page : 5 of 8

Please replace the paragraph beginning at page 9, line 2, with the following amended paragraph:

4.5 Parts by weight of formoterol fumarate dihydrate was mixed with 995 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler through the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler through the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler.

Please replace the paragraph beginning at page 9, line 8, with the following amended paragraph:

160 Parts by weight of micronised budesonide was mixed with 840 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhalers dry powder inhaler.

Please replace the paragraph beginning at page 9, line 14, with the following amended paragraph:

12 Parts by weight of formoterol fumarate dihydrate was mixed with 988 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler.

Applicant : Cari-Axel Bauer et al. Serial No. : 10/010,283 Filed : November 13, 2001

Page : 5 of 8

Please replace the paragraph beginning at page 9, line 19, with the following amended paragraph:

400 Parts by weight of micronised budesonide was mixed with 600 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Please replace the paragraph beginning at page 9, line 25, with the following amended paragraph:

6 Parts by weight of formoterol fumarate dihydrate was mixed with 994 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Please replace the paragraph beginning at page 10, line 1, with the following amended paragraph:

100 Parts by weight of micronised budesonide was mixed with 900 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Please replace the paragraph beginning at page 10, line 7, with the following amended paragraph:

4.5 Parts by weight of formoterol fumarate dihydrate was mixed with 995 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then Applicant: Carl-Axel Bauer et al. Serial No.: 10/010,283 Filed: November 13, 2001

Page : 7 of 8

conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Please replace the paragraph beginning at page 10, line 13, with the following amended paragraph:

80 Parts by weight of micronised budesonide was mixed with 920 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Please replace the paragraph beginning at page 10, line 19, with the following amended paragraph:

12 Parts by weight of formoterol furnarate dihydrate was mixed with 988 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.

Please replace the paragraph beginning at page 10, line 24, with the following amended paragraph:

200 Parts by weight of micronised budesonide was mixed with 800 parts by weight of lactose monohydrate. The blend was micronised using a high pressure air jet mill and then conditioned using the process of EP-A-717 616. The mixture was then spheronised using the process of EP-A-721 331 and filled into the storage compartment of a Turbuhaler dry powder inhaler.
